

The Owner's Guide to *your website.*

Everything you need to run roarrealty.in yourself — changing your phone number, adding properties, publishing your RERA registration, handling enquiries, and taking the site public.

WEBSITE	ADMIN PANEL	STATUS	ISSUED
roarrealty.in	roarrealty.in/studio	Preview mode	31 July 2026

§ What's in this guide

Sections 1—3 are the ones to read first. Section 9 is the single switch that makes the site public, and section 10 lists what's still outstanding.

1	Start here	7	Editing the homepage & writing articles
	Your three logins and what each one does		Headlines, statistics, insights
2	A tour of your admin panel	8	Your leads inbox
	What every item in the sidebar is for		Where enquiries land and how to work them
3	Your phone, RERA number & contact details	9	Going live: removing preview mode
	Do this first — it clears the ⚠ warnings		The pre-flight checklist and the switch
4	Adding a property	10	Setup still outstanding
	Every field, explained		Webhook, domain fix, Google, spam protection
5	Editing & removing properties	11	When something looks wrong
	Featuring, unpublishing, deleting		Troubleshooting the common cases
6	Testimonials, team & builders	12	Reference
	Including the consent rule		Accounts, costs, limits, and what not to touch

THE ONE-MINUTE VERSION

Everything you'd want to change lives at roarrealty.in/studio. Sign in with Google, edit, press **Publish**. The live website updates in about ten seconds. You never touch code, and you cannot break the site from there.

1 Start here

Three accounts run your website. You’ll use the first one almost daily and the other two only occasionally.

ACCOUNT	WHERE	WHAT IT’S FOR
Sanity Studio DAILY	<code>roarrealty.in/studio</code>	Your admin panel. Properties, photos, contact details, homepage text, testimonials, articles, and your leads inbox. Sign in with Google.
Vercel RARELY	vercel.com	Hosting. You’ll go here once to take the site public, and otherwise only if something needs redeploying.
GitHub NEVER	github.com/anurag2140/roar- realty	Where the code lives. Nothing here needs your attention day to day.

What the website already does

- Full property search — filter by type, budget, bedrooms, locality, possession status and amenities, with results shareable by link.
- Individual property pages with photo galleries, floor plans, maps, and the Glass File due-diligence panel.
- Enquiry forms that email you within seconds and store every lead in a private database.
- A WhatsApp button and a call/WhatsApp/enquire bar fixed to the bottom of every phone screen.
- Visitors can save properties to a shortlist and compare up to three side by side — no signup required.
- Automatic sitemaps and Google-readable listing data, ready to switch on.

THE SITE IS CURRENTLY PRIVATE

It is deliberately hidden from Google and shows a **“Preview mode · sample content”** bar at the top. That is intentional and stays until you finish section 9. Anyone with the link can still see it — it’s hidden from search engines, not password-protected.

2 A tour of your admin panel

Go to roarrealty.in/studio and sign in with Google. You'll see a list down the left-hand side.

Leads	Every enquiry anyone has sent you, newest first. Mark them New, Contacted, Qualified or Closed, add private notes, message them on WhatsApp in one click, or export the lot to a spreadsheet. <i>Asks for a separate password — see section 8.</i>
Properties	Your listings. Includes ready-made views for the ones featured on your homepage, the illustrative samples still to be replaced, and any listing with no photos yet.
Localities	Areas like Golf Course Road or Sector 150. Each one gets its own page on the website, which is how people searching “property in Golf Course Road” find you.
Builders	Developers, with their track record. Attach one to a listing and it appears on the property page.
Team & agents	Your people. Appears on the About page. Each can carry their own RERA number.
Testimonials	Client quotes for the homepage.
Insights	Articles and market reports. This is what earns you Google traffic over time.
FAQs	Questions and answers shown on The Roar Standard page. Google can display these directly in search results.
Homepage	Every headline, paragraph and statistic on your front page.
Site settings	Phone, WhatsApp, email, office address, RERA number, social links, and a few appearance options. Start here.

How editing works

- 1 Open the item you want to change**
and type. Your work saves automatically as a draft as you go — nothing is lost if you close the tab.
- 2 Press the green Publish button**
at the bottom of the screen. Until you do, changes are invisible to visitors.
- 3 Wait about ten seconds**
and refresh the website. Your change is live.

YOU CAN'T BREAK ANYTHING

Sanity keeps a full history of every document. If you delete a paragraph you wanted, open the item, click the ... menu at the top and choose **Review changes** to see previous versions and restore one.

3 Your phone, RERA number & contact details

These are blank right now, on purpose. Filling them in is the most important thing you'll do in this guide.

WHY THEY'RE BLANK

The original design carried invented placeholders — the phone number `+91 98100 00000` and the RERA registration `HRERA-GGM-XXXX-2026`. Neither is real. A fake phone number that *looks* real is far more dangerous than an obvious gap, because it gets published and nobody notices until a buyer dials it. So the website shows a visible **⚠ warning marker** wherever a detail is missing, and those markers disappear the moment you fill each field in.

How to fill them in

1 Open Studio → Site settings.

The Contact tab is showing by default.

2 Phone

— the number you want people to call. Write it how you'd want it read, for example `+91 98765 43210`.

3 WhatsApp number

— must include the country code and no spaces: `+919876543210`. This powers the green WhatsApp button that floats on every page and the WhatsApp tab on the mobile bar. If you leave it blank, those buttons stay hidden.

4 Email

— for example `hello@roarrealty.in`.

5 Office address

— your registered office, as you'd want it printed.

6 RERA agent registration number

— switch to the

Legal

tab. Enter it exactly as issued. It appears in your footer and on the disclaimer page.

7 Registered entity name and CIN

— also on the Legal tab, used in the copyright line.

8 Social profiles

— back on Contact, press

Add item

, choose the platform, paste the full URL.

9 Press Publish.

Refresh the site — the ⚠ markers are gone.

PLEASE READ BEFORE PUBLISHING THE SITE

In India, advertising property brokerage without displaying a valid RERA agent registration number is an offence under the Real Estate (Regulation and Development) Act, 2016. This applies in both Haryana and Uttar Pradesh, where your listings are. **The site should not be made public until a genuine registration number is in this field.** Section 9 covers the order to do things in.

Replacing the logo

The current logo is a JPEG, which looks slightly soft at large sizes. If you have an **SVG** or a **transparent PNG**, upload it under Site settings → Contact → Logo. It will sharpen the header, footer and social sharing images everywhere at once.

Appearance options

SETTING	WHAT IT DOES
Gold tone	Shifts the brand gold across the whole site. Four options; the default is the original.
3D effects	Master switch for the moving skyline, globe and liquid-gold backgrounds. Already turns itself off automatically on older phones.
Film grain overlay	The subtle texture over the whole page.
Announcement bar	A gold strip across the top for a launch or an event. Off by default.
Exit-intent popup	The offer shown when a visitor looks like they’re leaving. You control the wording.

4 Adding a property

Roughly five minutes per listing once you have the photos ready.

- 1 **Studio → Properties → All properties**
 , then the
 +
 button at the top.
- 2 **Type the property name.**
 Then click
Generate
 under URL slug — that becomes the web address.
- 3 **Choose the type**
 — Apartments, Villas, Off-plan, Commercial or Plots. This drives the search filters.
- 4 **Enter the price in crore.**
 This one catches people out: the box wants *crore*, not rupees. 85 lakh is . 14.5 crore is . Leave it blank and tick "Price on request" if you'd rather not show it.
- 5 **Write a short summary**
 — one or two sentences. It appears on cards and in Google results.
- 6 **Fill the Specifications tab**
 — bedrooms, bathrooms, carpet area, possession, amenities.
- 7 **Add photos**
 on the Photos & media tab. Drag them all in at once. The first is the card image; drag to reorder.
- 8 **Write alt text for each photo.**
 It's required, and it's how blind visitors and Google understand the image. "Living room with floor-to-ceiling windows" is plenty.
- 9 **Complete the Glass File tab**
 — tick only what has genuinely been verified. See the warning below.
- 10 **Set the Location tab**
 — city, locality, and drop a map pin if you have one.
- 11 **Press Publish.**
 It appears on the site in about ten seconds.

The fields that matter most

Price (₹ crore) important In crore. = 85 lakh. = 14.5 crore.

Carpet area	The area the buyer actually occupies. This is what your pricing promise is built on — always fill it.
Super built-up area	Optional, but powerful. Enter both and the page automatically calculates and displays the percentage the buyer <i>isn't</i> getting. It's the clearest demonstration of your carpet-area rule on the whole site.
Badge	The small label on the photo — “Ultra-luxury”, “Escrow-protected”, “Pre-leased 7.1%”.
Feature on homepage	Puts it in the six-property grid on the front page.
Illustrative sample	Marks a listing as placeholder. Shows a “Sample” badge and hides it from Google. All nine current listings have this ticked.
Price breakdown	Itemise every charge in plain language. Renders as a clean table on the listing page.
Brochure	Upload a PDF and the page offers it as a download — but asks for a phone number first, so each download becomes a lead.

ONLY TICK WHAT YOU’VE ACTUALLY CHECKED

The Glass File panel deliberately shows unverified items as *not* ticked rather than hiding them. A due-diligence panel that only ever shows green ticks tells a buyer nothing, and would be exactly the opacity your business exists to replace. An honest partial file is far more persuasive than a suspiciously perfect one.

5 Editing & removing properties

Changing something

Open the property, edit, press **Publish**. Around ten seconds later it's live.

Taking a property off the website

You have three options, and they’re not the same thing:

IF YOU WANT TO...	DO THIS
Hide it temporarily Under offer, or paused	Open it, click the ... menu at the top right, choose Unpublish . It vanishes from the site but stays in Studio, ready to bring back.
Mark it sold	Unpublish it. If you’d rather keep the page up for credibility, change the badge to “Sold” and remove it from featured.
Delete it permanently	Same ... menu → Delete . This cannot be undone from the interface, so unpublish first if you’re unsure.

Replacing the nine sample listings

Your site currently shows nine illustrative properties carried over from the design. They’re clearly badged “Sample” and hidden from Google. Two ways to deal with them:

- **If a sample happens to be real inventory** — open it, correct the details, untick **Illustrative sample**, publish.
- **Otherwise** — add your real listings first, then delete the samples. Studio → Properties →  **Illustrative samples** lists them all in one place.

HANDY VIEWS

Under Properties you’ll find **Featured on homepage**,  **Illustrative samples** and **Missing photos**. That last one is worth checking before you go live — a listing with no photographs converts very poorly.

6 Testimonials, team & builders

Testimonials

Studio → Testimonials. Three placeholder quotes are in there now, each ticked as **Illustrative sample**. Replace them with real ones, then untick that box.

GET WRITTEN CONSENT FIRST

Publishing invented client quotes as though they were real falls foul of the ASCI code and the misleading-advertisement provisions of the Consumer Protection Act. Before a testimonial goes live, get the client's permission in writing — a WhatsApp message saying “yes, happy for you to use that” is enough, and worth keeping.

The same applies to the claims on your homepage: **“12 years”**, **“4,200 keys handed over”** and **“100% escrow-protected”**. Confirm each is literally true, or edit it in Studio → Homepage.

Team & agents

Studio → Team & agents. Name, role, photo, a short bio, and their individual RERA registration number if they hold one. They appear on your About page in the order you set under “Display order” — lower numbers come first.

Builders

Add a developer once — name, logo, year established, projects delivered, and a short note on their track record — and then attach them to any listing from that property's Location tab. Their record then shows on the property page, which supports the due-diligence story rather than just asserting it.

Localities

Each locality becomes its own page, for example roarrealty.in/in/gurugram/golf-course-road. Those pages are how someone searching “property in Golf Course Road” finds you. Add a short intro and, if you have time, a proper area guide in the body field — the more genuinely useful that page is, the higher it ranks.

7 Editing the homepage & writing articles

The homepage

Studio → **Homepage**. It’s split into tabs that match the page as you scroll down it:

TAB	WHAT IT CONTROLS
Hero	The opening headline, the paragraph beneath it, the four statistics, and the scrolling gold banner.
Chapters I & II	The Dubai story and the four statistics about the Indian market.
The Roar Standard	Your six rules.
Process	The five steps.
Portfolio	The heading above the property grid.
Comparison	The “old way vs the Roar way” table.
Contact	The heading and intro above the enquiry form.

About those animated statistics

Each stat has a **Displayed value** (what people read, e.g. `4,200+`) and an optional **Count up to** number. Fill the second and the figure animates from zero as the visitor scrolls to it. Leave it blank and the number simply sits there — which is what you want for something like `100%` .

Writing an article

Studio → Insights → **+** . Articles are the single most effective way to bring in visitors who’ve never heard of you. A short honest piece on what actually sold in Gurugram last quarter will out-perform any amount of marketing copy.

- 1

Title
 , then
Generate
 the slug.
- 2

Excerpt
 — two lines. Used on the listing page and in Google results.
- 3

Cover image
 and a
category
 .
- 4

Write the article
 in the body field. You can add headings, lists, links and images inline.
- 5

Publish.

FAQs

Studio → FAQs. Six are already written for you. These appear on The Roar Standard page and are marked up so Google can show them directly in search results — which is free visibility, so it's worth adding the questions buyers actually ask you.

8 Your leads inbox

Every enquiry from every form on the site lands in two places at once: your email, and a private inbox inside Studio.

What happens when someone enquires

1 They submit a form

— the contact page, a Glass File request, a site-visit request, a brochure download, or the exit popup.

2 You get an email within seconds

, with their name, number, which property they were looking at, and buttons to call or WhatsApp them straight away.

3 They get an automatic reply

in your brand's voice, confirming a shortlist is coming within 48 hours.

4 The enquiry is stored

in your private database, so a lost email is never a lost lead.

Working the inbox

Studio → **Leads**. It asks for a password the first time — a separate one from your Google sign-in, because this data is more sensitive than your website content.

WHERE TO FIND THE LEADS PASSWORD

It's deliberately not printed in this document, since a PDF gets forwarded. Find it at **vercel.com** → your project → **Settings** → **Environment Variables** → the value of `LEADS_ADMIN_PASSWORD`. Click the eye icon to reveal it. You can change it there to something memorable — edit the value, save, and redeploy.

Once you're in, each lead can be:

- Moved between **New** → **Contacted** → **Qualified** → **Closed** with one click.
- Annotated with private notes that only your team sees.
- Messaged on WhatsApp instantly via the link on the right of each card.
- Searched by name, phone, email, property or message content.
- Exported — **Export CSV** downloads everything currently on screen, ready for Excel or a CRM.

Spam protection

Three defences are already running without any setup: a hidden field that only automated bots fill in, a timing check that rejects anything submitted impossibly fast, and rate limits of three enquiries per minute and twenty-five per day from a single visitor. Section 10 covers an optional fourth layer.

ON PRIVACY

Enquiries are stored in a private database, never in the public content system, and visitors' IP addresses are stored as a one-way hash rather than the address itself. Your published privacy policy reflects exactly this, and commits you to never selling or sharing enquirers' details.

9 Going live: removing preview mode

One setting takes the site public. Everything on the checklist below should be done before you flip it.

What preview mode is doing right now

- Telling Google and every other search engine not to index any page.
- Serving an empty sitemap and a `Disallow: /` instruction to crawlers.
- Showing the “Preview mode · sample content” bar at the top of every page.
- Keeping every illustrative sample listing out of search results.

Pre-flight checklist

BEFORE YOU GO PUBLIC

- ☐ Real **RERA agent registration number** is in Site settings *legally required*
- ☐ Real phone, WhatsApp, email and office address are filled in
- ☐ Your real listings are published
- ☐ The nine illustrative samples are deleted or corrected
- ☐ Testimonials are real, with written consent — or the placeholders are deleted
- ☐ The “12 years” and “4,200 keys” claims are confirmed accurate
- ☐ Properties → **Missing photos** is empty
- ☐ The domain fix in section 10.2 is done

The switch

- 1 Go to **vercel.com** and open your **roar-realty** project.
- 2 Click **Settings**, then **Environment Variables** in the left menu.

- 3 Find `NEXT_PUBLIC_LAUNCH_MODE`. Click **Edit**.
.
- 4 Change the value from `preview` to `live`. Save.
- 5 Go to the **Deployments** tab, click the `...` on the most recent deployment, and choose **Redeploy**.
.
- 6 Wait about two minutes, then load the site. The preview bar is gone and you're public.

IT'S REVERSIBLE

If you need to pull the site back out of public view, set the same variable to `preview` and redeploy. Do note that Google may already have indexed pages by then, and those take a while to drop out again.

Immediately afterwards

- 1 **Tell Google the site exists.**
Go to `search.google.com/search-console`, choose **Domain**, enter `roarrealty.in`, and add the TXT record it gives you at your domain registrar. Verify.
- 2 **Submit your sitemap**
— in Search Console, open Sitemaps and enter `sitemap.xml`.
- 3 **Check a property page**
in Google's Rich Results Test to confirm listings are readable as structured data.

10 Setup still outstanding

Four items. The first two are worth doing this week; the rest are optional improvements.

10.1 Connect the content webhook RECOMMENDED

Without this, your edits take up to an hour to appear instead of ten seconds. It's a five-minute, one-time setup.

- 1 Go to **sanity.io/manage** and open your project.
- 2 **API**
→
Webhooks
→
Create webhook
.
- 3 **URL:**
`https://roarrealty.in/api/revalidate`
- 4 **Dataset:**
`production`
Trigger on:
tick Create, Update and Delete
- 5 **Filter:**
`_type in`
`["property","homepage","siteSettings","testimonial","insight","faq","locality","builder","teamMember"]`
- 6 **Projection:**
`{"_type": _type, "slug": slug.current}`
- 7 **HTTP method:**
POST.
Secret:
copy the value of `SANITY_REVALIDATE_SECRET` from Vercel → Settings → Environment Variables.
- 8 Save. Publish any change and confirm the site updates within seconds.

10.2 Fix the www / non-www mismatch DO BEFORE GOING LIVE

Vercel currently treats **www.roarrealty.in** as your main address, so `roarrealty.in` redirects to it. But the site tells Google its official address is `roarrealty.in` without the www. The two disagree, which sends Google mixed signals about which version to rank.

Harmless while you're private. Fix it in under a minute:

- 1 Vercel → your project →
Settings
→
Domains
.
- 2 Find `roarrealty.in` (the one without www) and set it as the
Primary Domain
.
- 3 Done — www now redirects to the short address, matching what the site tells Google.

If you'd rather keep www as your public address, that's equally fine — instead change `NEXT_PUBLIC_SITE_URL` in Vercel to `https://www.roarrealty.in` and redeploy. They just have to agree.

10.3 Add invisible spam protection OPTIONAL

Free and unlimited, and unlike the old “click all the traffic lights” puzzles it's invisible to genuine visitors.

- 1 Sign up free at
dash.cloudflare.com
. You do *not* need to move your domain there.
- 2 Open
Turnstile
in the sidebar →
Add widget
.
- 3 Name it `roar-realty`, add the hostnames `roarrealty.in`, `www.roarrealty.in` and `localhost`, mode
Managed
.
- 4 Copy the two keys into Vercel → Settings → Environment Variables as `NEXT_PUBLIC_TURNSTILE_SITE_KEY` and `TURNSTILE_SECRET_KEY`, then redeploy.

The site detects both keys and switches the protection on by itself. No code change needed.

10.4 A mailbox that can receive mail OPTIONAL

Your site *sends* from `hello@roarrealty.in`, which is already verified and working. But nothing currently *receives* mail at that address. **Zoho Mail's Forever Free plan** (zoho.com/mail) gives you five mailboxes on your own domain at no cost — about fifteen minutes of DNS setup. Google Workspace has no free tier any more.

11 When something looks wrong

WHAT YOU’RE SEEING	WHAT’S HAPPENING
I published a change but the site looks the same	Either the webhook in 10.1 isn’t connected yet — changes then take up to an hour — or your browser cached the old page. Press Ctrl+Shift+R to force a fresh copy.
A ⚠ warning marker on the live site	A contact detail is still blank. Go to Site settings and fill it in — see section 3.
“Sample” badges on my listings	The Illustrative sample box is ticked on that property. Untick it and publish.
The WhatsApp button isn’t showing	The WhatsApp number in Site settings is empty, or missing its country code. It must look like <code>+919876543210</code> .
A property won’t appear in search results	Check it’s published, not just saved as a draft — the Publish button turns grey once there’s nothing left to publish.
Studio won’t load, or shows a connection error	Usually the address you’re visiting isn’t on Sanity’s approved list. <code>sanity.io/manage</code> → your project → API → CORS origins → add it with “Allow credentials” ticked.
No email when a form is submitted	Check your spam folder first. Then confirm <code>LEAD_NOTIFY_EMAIL</code> in Vercel points at the right inbox.
The moving 3D backgrounds aren’t showing	Working as intended. They switch off automatically on older phones, on slow connections, and for anyone who has asked their device to reduce motion.
Google still isn’t showing my site	Indexing takes days to weeks even after going live. Confirm preview mode is off, then check Search Console for coverage errors.

RESTORING SOMETHING YOU DELETED

Open the item, click ⋮ at the top right, and choose **Review changes**. You can see every previous version and roll back to any of them. This works for text you’ve overwritten as well as whole documents.

12 Reference

What you're running, and what it costs

SERVICE	COST	WHAT IT DOES
Vercel	Free	Hosts the website. 100 GB of traffic a month included — far beyond what this site will use.
Sanity	Free	Your admin panel and content. 10,000 documents, 100 GB of images.
Neon	Free	The private database holding your enquiries.
Resend	Free	Sends the lead emails. 100 a day, 3,000 a month. Each enquiry uses two.
Domain	Your renewal	roarrealty.in

ONE THING TO BE AWARE OF

Vercel's free plan is described in their terms as being for non-commercial, personal use. A great many small business sites run on it without incident, but they would be within their rights to ask you to upgrade. If you'd rather not carry that, the paid plan is \$20 a month, or the site can be moved to Cloudflare — also free, and explicitly fine for commercial use. It's a half-day job and nothing about the site changes.

Every address you might need

Your website	roarrealty.in
Your admin panel	roarrealty.in/studio
Your leads inbox	roarrealty.in/studio → Leads
Hosting dashboard	vercel.com
Content project settings	sanity.io/manage
Email delivery logs	resend.com
Google Search Console	search.google.com/search-console
The code	github.com/anurag2140/roar-realty

Settings in Vercel worth knowing

Vercel → your project → Settings → Environment Variables. Changing any of these requires a redeploy to take effect.

NAME	WHAT IT DOES
NEXT_PUBLIC_LAUNCH_MODE	The public/private switch. <code>preview</code> or <code>live</code> .
LEADS_ADMIN_PASSWORD	The password for your leads inbox. Change it to whatever you like.
LEAD_NOTIFY_EMAIL	Where enquiry alerts are sent. Accepts several addresses separated by commas.
NEXT_PUBLIC_SITE_URL	Your official web address, used for Google and social sharing.

PLEASE DON'T CHANGE THESE

Anything containing a long random string — the Sanity tokens, the database address, the Resend key. Those are passwords to the services that keep your site running, and altering one will take the site or your enquiry forms offline until it's put back.

The order to do things in

- 1

Fill in Site settings

— phone, WhatsApp, email, address, RERA number. [Section 3](#)
- 2

Connect the webhook

so your edits appear instantly. [Section 10.1](#)
- 3

Fix the www mismatch.

[Section 10.2](#)
- 4

Add your real properties

and remove the samples. [Sections 4 and 5](#)
- 5

Replace the testimonials

, with consent. [Section 6](#)
- 6

Work through the pre-flight checklist

, then switch to live. [Section 9](#)
- 7

Submit the site to Google

and watch the leads arrive. [Section 9](#)

A CLOSING NOTE

Everything in sections 1 through 8 is yours to change whenever you like, without a developer and without any risk of breaking the site. The parts that could break it are locked away in Vercel, and this guide has been careful to point out which those are.
