Your strongest lead generators |
| 5 | Changing words on the homepage
Headlines, statistics, the six rules | 11 | When something looks wrong
Fix it yourself in a minute |
| 6 | Writing articles
The thing that brings people from Google | 12 | Reference
Costs, addresses, and what not to touch |

IF YOU READ NOTHING ELSE

Go to roarrealty.in/studio, sign in with Google, change what you like, press the green **Publish** button. The website updates in about ten seconds. You cannot break anything from there, and every old version is kept in case you want it back.

1 The one thing to understand

Your website has two halves. Knowing which half you are in explains everything else in this guide.

THE HALF

WHAT IT IS

The website

roarrealty.in

What your customers see. You never edit this directly. It simply displays whatever is in the other half.

Your control panel

roarrealty.in/studio

Where all the words, photos and settings actually live. You edit here, and the website updates itself.

That separation is why you can change your phone number, add a review or rewrite a headline without anyone technical being involved. It also means there is nothing you can click in the control panel that takes the website offline.

How every change works

1 Go to roarrealty.in/studio

and sign in with Google. Use the same Google account each time.

2 Find the thing you want to change

in the left-hand menu, and click it.

3 Type.

Your work saves automatically as you go, so nothing is lost if you close the tab or your phone dies.

4 Press the green Publish button

at the bottom. Until you do, nobody else can see the change.

5 Wait about ten seconds

, then refresh the website. Done.

CHANGED YOUR MIND?

Open the item, click the ... button at the top right, and choose **Review changes**. You will see every previous version and can put any of them back. This works for a paragraph you overwrote as well as for a whole page you deleted.

ON YOUR PHONE

The control panel works on a phone browser. It is more comfortable on a laptop for long writing, but adding a review or correcting a phone number from your phone is perfectly practical.

2 A tour of your control panel

Sign in at roarrealty.in/studio. This is the list down the left-hand side, top to bottom.

Leads	Every enquiry anyone has ever sent you. Mark them New, Contacted, Qualified or Closed, add private notes, message them on WhatsApp in one click, or download the lot as a spreadsheet. Asks for its own password, see section 8.
Properties	Your listings. Currently switched off on the website until you add real ones, see section 7.
Localities	Areas like Golf Course Road or Business Bay. Each one gets its own page, which is how someone searching "property in Golf Course Road" finds you.
Builders	Developers and their track record. Attach one to a listing and it appears on that property's page.
Team & agents	Your people. Appears on the Founder page.
Testimonials	Client reviews. New ones submitted through the website land here waiting for your approval. See section 4.
Insights	Your articles. Seventeen are already written and live. See section 6.
FAQs	Questions and answers shown on The Standard page. Google can display these directly in search results, which is free visibility.
Homepage	Every headline, paragraph and statistic on your front page. See section 5.
Site settings	Phone numbers, WhatsApp desks, email, address, social links, and a few appearance options. See section 3.

TWO WORDS YOU WILL SEE A LOT

Publish means "make this visible on the website". **Unpublish** means "hide this from the website but keep it here". Unpublishing is always safer than deleting, and always reversible.

3 Your phone numbers and contact details

All of this lives in one place: **Site settings**, on the Contact tab.

What is currently set

SETTING	CURRENT VALUE
Phone	+91 78989 89029
WhatsApp, India desk	+91 78989 89029
WhatsApp, Dubai desk	+971 58 545 5256
Extra WhatsApp desk	+971 56 865 2202
Primary email	contact@roarrealty.ae
India email	admin@roarrealty.in
Office address	1507, Al Manara Tower, Business Bay, Dubai
Registered entity	Roar Realty LLC

How the WhatsApp button behaves

Because you have more than one number, the green WhatsApp button does not guess. Tapping it opens a small list so the visitor picks a desk, and the message is already written for them, including which page they were reading. So instead of "Hi", you receive something like:

Hello Roar Realty, I'd like to discuss a property (from the dubai page).

That tells you what they were looking at before you have said a word, which is worth more than it sounds.

To change or add a number

- 1 **Site settings → Contact tab.**
- 2 **Edit the number you want to change.**

Always include the country code and no spaces: .

- 3

To add a fourth desk

, scroll to "Extra WhatsApp desks", press

Add item

, give it a name (which the visitor sees) and the number.
- 4

Press Publish.

THE COUNTRY CODE MATTERS

A WhatsApp number without its country code will not work. If the button stops opening WhatsApp, this is almost always why. Check there is a

+

 and no spaces or brackets.

Other things on this screen

Social profiles	Press Add item, choose the platform, paste the full link. They appear in the footer.
Logo	Upload a replacement any time. An SVG or transparent PNG will look sharper than the current JPEG.
Gold tone	Shifts the brand gold across the entire site. Four options.
3D effects	The moving skyline and globe. Already switches itself off on older phones.
Announcement bar	A gold strip across the top of every page for a launch or an event. Off by default.
Exit popup	What appears when a visitor looks like they are leaving. You control the wording.
RERA number	Currently blank, and the notice about it is hidden. The moment you type a number here, it appears in your footer and on the disclaimer page automatically.

4 Getting reviews, and publishing them

Your website has a full review system at roarrealty.in/reviews. Clients write them, you approve them, they appear.

How it works

1 A client fills in the form

at roarrealty.in/reviews. They give a star rating, their review, where they are based, where they bought, and their email and phone.

2 It arrives in your control panel

under Testimonials, marked with an hourglass and the words AWAITING APPROVAL. It is not on the website yet, and nobody can see it.

3 You check it.

Their email and phone are attached so you can confirm they are genuinely a client of yours.

4 Tick "Approved for the website"

and press Publish. It appears within ten seconds, and the star rating at the top of the reviews page recalculates automatically.

WHY THIS IS WORTH DOING PROPERLY

Because you verify each one, your reviews page can honestly say every review is checked against your transaction records. No competitor can claim that, and it is exactly the kind of proof your whole brand is built on. Reviews you cannot stand behind would undermine the one thing that makes you different.

Getting your first fifteen, fast

The quickest route is a personal WhatsApp to past clients. Copy this, change the first name, send it one at a time rather than as a broadcast.

Hi [name], hope you're well.

We've just put the new Roar Realty website live and I'm adding a reviews section to it. Would you mind writing a couple of lines about how the process went for you? Honest is better than glowing, if something took longer than you wanted, say that too.

Takes about a minute here: roarrealty.in/reviews

Thank you, it genuinely helps.

A few things that make a real difference to the response rate:

- **Ask individually.** A broadcast gets ignored; a personal message gets answered.
- **Ask soon after a handover**, while the experience is fresh and the goodwill is high.
- **Say honest is better than glowing.** It removes the awkwardness, and the review you get back will be far more persuasive.
- **Send the direct link**, roarrealty.in/reviews, not just the homepage.

Adding a review yourself

If a client sends you their words over WhatsApp instead, you can enter it for them: Testimonials → + → fill in the quote, their name, rating, region and where they bought → make sure **Approved** is ticked → Publish.

BEFORE YOU PUBLISH SOMEONE'S WORDS

Get their permission, even a WhatsApp message saying "yes, fine to use that" is enough, and keep it. Publishing a named person's quote without their agreement causes problems that are entirely avoidable by asking.

UNTIL YOU HAVE REAL ONES

The reviews section does not appear on your homepage at all while it is empty. That reads as a new practice, which is fine. Cards saying "placeholder" would read as carelessness, which is not, so those hide themselves automatically now the site is live.

5 Changing words on the homepage

Control panel → **Homepage**. It is split into tabs that match the page as you scroll down it.

TAB	WHAT IT CONTROLS
Hero	The big opening headline, the paragraph under it, the four statistics, and the scrolling gold banner.
Dubai / Gurgaon	The two large panels asking "Where are you buying?"
Selection framework	Your three-step method: understand the client, filter the opportunity, plan entry and exit.
Chapters I & II	The Dubai story and the four statistics about the Indian market.
The Roar Standard	Your six rules.
Process	The five steps.
Comparison	The "typical broker vs the Roar way" table.
Founder block	The short paragraph about you near the bottom.
Contact	The heading and introduction above the enquiry form.

The statistics

Each statistic has a **Displayed value**, which is what people read, and an optional **Count up to** number. Fill in the second one and the figure animates from zero as the visitor scrolls to it. Leave it empty and the number just sits there, which is what you want for something like

100%

.

TWO FIGURES TO LOOK AT

One statistic currently reads **TBC, transactions closed, confirm figure**. That is deliberate, it is waiting for a number you can stand behind. Another says **100% escrow-protected on eligible Dubai transactions**. Both are on a public, indexed page now, so they are worth a second look.

6 Writing articles

Seventeen articles are already written and live at roarrealty.in/insights. This is what will bring you visitors from Google who have never heard your name.

Why bother

Someone searching "super built up vs carpet area" or "what does escrow actually cover in Dubai" is a buyer thinking carefully. If your article answers them properly, you have earned the conversation before any competitor knows they exist. It is slow, and it compounds.

Adding one

1 Insights → the + button.

2 Type the title

, then click

Generate

under the slug. That becomes the web address.

3 Write a two-line excerpt.

It shows on the listing page and in Google results.

4 Add a cover image and a category.

5 Write the article

in the body box. You can add headings, lists, links and images as you go.

6 Publish.

DATES ARE HIDDEN ON PURPOSE

Articles do not show a publication date anywhere on the site. Your pieces are about how markets work rather than this week's news, and a visible date makes good advice look stale long before it actually is.

What to write about

The pieces that work best for you are the ones that tell buyers something inconvenient. What Dubai's protections do not cover. Why a delay penalty clause is usually decoration. How to check "only two units left" in ten seconds. That is the voice the existing seventeen are written in, so anything new should sit alongside them comfortably.

7 Turning on properties

The whole property system is built and working. It is simply switched off until you have real listings to put in it.

What is waiting behind the switch

- A search page with filters for type, budget, bedrooms, locality, possession status and amenities
- Individual property pages with photo galleries, floor plans, maps and the Glass File panel
- Visitors can save properties to a shortlist and compare three side by side
- A "Request Glass File" button on every listing that becomes an enquiry

To switch it on

1 Add at least four real properties first.

Properties → the + button.

2 Site settings → Look & effects → tick "Show the properties section".

3 Publish.

The Properties link appears in your menu and the grid appears on the homepage.

Adding a property

About five minutes each, once you have the photos.

Price	In crore , not rupees. 85 lakh is 0.85 . 14.5 crore is 14.5 . This catches everyone out once.
Carpet area	The area the buyer actually occupies. Always fill this in, it is what your pricing promise rests on.
Super built-up	Optional but powerful. Enter both and the page automatically works out and displays the percentage the buyer is <i>not</i> getting.
Photos	Drag them all in at once. The first is the card image. Alt text is required for each, one short sentence describing the photo.
Glass File	Tick only what has genuinely been verified. Unticked items show as unticked on purpose.
Brochure	Upload a PDF and the page offers it as a download, but asks for a phone number first. Every download becomes a lead.

USEFUL VIEWS

Under Properties you will find **Featured on homepage** and **Missing photos**. Check the second one before switching the section on. A listing with no photograph converts very badly.

8 Your enquiries inbox

Every form on the website lands in two places at once: your email, and a private inbox inside the control panel.

What happens when someone enquires

1 They submit a form

, from the contact page, a calculator, the exit popup, or a property.

2 You get an email within seconds

with their name, number, what they were looking at, and buttons to call or WhatsApp them straight away.

3 They get an automatic reply

in your brand's voice, promising a shortlist within 48 hours.

4 The enquiry is stored

in a private database, so a lost email is never a lost lead.

Working the inbox

Control panel → **Leads**. It asks for a password the first time, separate from your Google sign-in, because this data is more sensitive than your website words.

WHERE TO FIND THE LEADS PASSWORD

Deliberately not printed in this document, since PDFs get forwarded. Go to **vercel.com** → your project → **Settings** → **Environment Variables** and reveal the value of `LEADS_ADMIN_PASSWORD`. You can change it there to something you will remember.

Each lead can be moved between **New, Contacted, Qualified and Closed**, annotated with private notes, messaged on WhatsApp in one click, searched, and exported to a spreadsheet with the **Export CSV** button.

Spam

Three defences run automatically: a hidden field only robots fill in, a timing check that rejects anything submitted impossibly fast, and limits of three enquiries a minute and twenty-five a day from one visitor. You do not need to do anything.

ON PRIVACY

Enquiries are stored in a private database, never in the public content system, and visitors' IP addresses are stored scrambled rather than readable. Your published privacy policy reflects exactly this and commits you to never selling or sharing enquirers' details.

9 Every page on the site

Thirteen public pages, plus your control panel. This is what each one is for.

ADDRESS	WHAT IT DOES
/	Homepage. Positions you, proves the method, sends people to Dubai or Gurgaon.
/dubai	Your main commercial page. What Dubai protects buyers from, what it does not, and the eight-point filter.
/gurgaon	The India practice. The seven-check verification table and the questions buyers should ask.
/the-roar-standard	Your six rules, the comparison table, and the FAQs.
/tools	Two free calculators. See section 10.
/insights	Your seventeen articles.
/reviews	Client reviews plus the submission form.
/about	Your story, in first person.
/process	The five steps, expanded.
/contact	The main enquiry form and your details.
/privacy /disclaimer	Legal pages. Written already, linked in the footer.
/terms	
/studio	Your control panel. Not visible to the public and blocked from Google.

WHY DUBAI COMES BEFORE GURGAON IN THE MENU

Deliberate. Menu order tells a visitor where the weight of your business sits before they read a single word. If that balance ever changes, the order should change with it.

10 The free calculators

At roarrealty.in/tools. These are the strongest lead generators on the site, and worth understanding.

The Dubai yield calculator

A visitor enters a purchase price, the advertised rent and the unit size. The calculator then deducts the service charge, void periods, management fee and letting commission, and shows what actually reaches them, alongside the gap between that and the advertised figure.

The moment somebody drags the service-charge slider and watches a 7% yield become 4.2%, they understand your entire argument without you saying a word. A button appears at exactly that point offering to check the real numbers for their specific building. That is the conversion.

The carpet area calculator

The visitor enters the super built-up area, the carpet area and the quoted rate. It shows what they are really paying per square foot of usable space, and what the difference costs them in rupees. Rule 03, turned into arithmetic.

WHY THESE WORK BETTER THAN A BROCHURE

Nobody shares an advert. People do share a tool that showed them something alarming about a purchase they were about to make. Both calculators are free, need no email, and are built to be sent to a friend, which is how inbound actually starts.

Other things quietly bringing you leads

WhatsApp button	On every page, with the message pre-written including which page they came from.
Mobile bar	Call, WhatsApp and Enquire fixed to the bottom of every phone screen.
Exit popup	Appears when a visitor looks like they are leaving. Suppressed for thirty days once dismissed, so it never nags.
Article endings	Every piece leads somewhere useful rather than stopping dead.
Search results	Your six rules and FAQs are marked up so Google can show them directly in results.

11 When something looks wrong

WHAT YOU’RE SEEING

WHAT TO DO

I published a change but the site looks the same	Your browser is showing you a saved copy. Press Ctrl+Shift+R (or Cmd+Shift+R on a Mac) to force a fresh one. If it still has not changed after a few minutes, the webhook in section 12 is not connected yet.
The WhatsApp button does nothing	The number is missing its country code. It must look like <code>+919876543210</code> , with no spaces.
A review I approved is not showing	Check you pressed Publish as well as ticking Approved. Both are needed.
The reviews section is missing from my homepage	It hides itself until at least one real review is approved. Add one and it reappears.
The control panel will not load	Usually the address you are visiting has not been approved in Sanity. <code>sanity.io/manage</code> → your project → API → CORS origins → add it with "Allow credentials" ticked.
No email when a form is submitted	Check your spam folder first. Then confirm <code>LEAD_NOTIFY_EMAIL</code> in Vercel points at the right inbox.
The moving backgrounds are not showing	Working as intended. They switch off on older phones, slow connections, and for anyone who has asked their device to reduce motion.
Google is not showing my site	Indexing takes days to weeks. Make sure you have completed the Search Console step in section 12.

GETTING SOMETHING BACK THAT YOU DELETED

Open the item, click ... at the top right, choose **Review changes**. Every previous version is there and you can roll back to any of them.

12 Reference

Still to do

TASK

- ☐ **Google Search Console.** `search.google.com/search-console` → Add property → Domain → `roarrealty.in` → add the TXT record at your registrar → verify → submit `sitemap.xml`. Nothing appears in Google until you do this.
- ☐ **Connect the content webhook,** so your edits appear in ten seconds instead of up to an hour. Five minutes, one time. Steps are in docs/GO-LIVE.md section 10.1.
- ☐ **Collect real reviews.** Section 4 has the message to send.
- ☐ **Confirm the two homepage figures** mentioned in section 5.
- ☐ **Add your RERA number** when issued. Site settings → Legal.
- ☐ **A mailbox that receives.** Your site sends from your domain already, but nothing receives at those addresses yet. Zoho Mail’s free plan gives you five mailboxes on your own domain.

What you are running, and what it costs

SERVICE	COST	WHAT IT DOES
Vercel	Free	Hosts the website.
Sanity	Free	Your control panel and all content.
Neon	Free	The private database holding enquiries.
Resend	Free	Sends the lead emails. 100 a day.
Domain	Your renewal	<code>roarrealty.in</code>

ONE THING TO BE AWARE OF

Vercel’s free plan is described in their terms as being for non-commercial use. Many small business sites run on it without incident, but they would be within their rights to ask you to upgrade. The paid plan is \$20 a month, or the site can be moved to Cloudflare, also free and explicitly fine for commercial use. Half a day’s work, and nothing about the site changes.

Every address you might need

Your website	roarrealty.in
Your control panel	roarrealty.in/studio
Your enquiries	roarrealty.in/studio → Leads
Send clients here for reviews	roarrealty.in/reviews
Hosting dashboard	vercel.com
Content project settings	sanity.io/manage
Email delivery logs	resend.com
Google Search Console	search.google.com/search-console
The code	github.com/anurag2140/roar-realty

Settings that live in Vercel, not the control panel

Vercel → your project → Settings → Environment Variables. Changing any of these needs a redeploy afterwards.

NAME	WHAT IT DOES
LEADS_ADMIN_PASSWORD	The password for your enquiries inbox.
LEAD_NOTIFY_EMAIL	Where enquiry alerts are sent. Accepts several addresses separated by commas.
NEXT_PUBLIC_SITE_MODE	Not currently set, and the site is live. Adding it with the value <code>preview</code> pulls the whole site out of Google.

PLEASE DO NOT CHANGE THESE

Anything containing a long random string: the Sanity tokens, the database address, the Resend key. Those are passwords to the services keeping your site running, and altering one takes the website or your enquiry forms offline until it is put back.

A CLOSING NOTE

Everything in sections 1 to 8 is yours to change whenever you like, without a developer and without any risk of breaking the site. The parts that could break it live in Vercel, and this guide has been careful to point out exactly which those are.
